

A Colony Of Forgotten People

In Amazon Jungle

The discovery in the Amazon jungle of a colony of "forgotten" people, descendants of aristocratic Southern families who migrated to

Dr. W. H. Haas, lecturer and Professor of Geology at Northwestern University, Chicago. Dr. Haas came upon the colony during one of his exploration trips up the Amazon. The colony is named Santerin, and is situated on the banks of the Tapa Jos River, a tributary of the Amazon.

Haas met a woman who had moved to the tropics immediately after the war between the States. "She was living in the past," he declared. "As I talked with her she seemed to forget her bedraggled clothes, her bare feet and her primitive surroundings."

She recalled her father's extensive plantation back in Alabama, with slaves singing and working in the cotton fields. She told Dr. Haas that number of Southern families, who

were dismissed when their slaves were freed as a result of the war, moved to the Amazon basin, where slavery was permitted and where they hoped to begin life anew. But the hopes of these plantation owners were soon blasted. The moist climate

There was no market for other products. In the midst of dense forests and located so far from civilization, they could not make contact with prospective buyers. Many of the younger Southerners, dissatisfied with the poverty and ignorance of the village life, returned to the United States. The others remained to eke out an existence by growing pumpkins, coconuts and beans.

Might Not Solve Problem

There are people who contend that back-to-the-land is the solution of our troubles. But one cannot be too sure. United States statistics reveal that in the year 1790 ninety per cent.

In 1930 there was but 20 per cent. of the population of United States

engaged in agriculture, and we learn that 85 per cent. of all agricultural products entering trade are produced by half the farmers of the country—that is, by 10 per cent. of the popu-

What has taken place? The mechanization of the farm and the elimination of the horse has reduced the demand for farm-produced crops

as much as though 40,000,000 persons had stopped eating. It has been carefully established that since people ride so much in motor cars they do not need so much food, and the

duction is equal to 15 per cent. in cattle alone. That is, the demand for beef has fallen to that extent. The increase in the demand for food of that nature is the same as though 1,000,000 persons had stopped eating

because they would require as much food as the 10,000,000 cattle which are not now needed. The scientist is invading the field of agriculture. He finds that the

average yield of corn per acre is only 5 bushels, and he knows that it is possible by highly scientific methods to grow 225 bushels per acre. He knows that to be the case because he has demonstrated it can be done.

average yield of cotton is 6.32 bales per acre, but the scientist has shown he can produce 3.5 bales per acre.

Putting more people back on the land in face of the advances which have been made in production possibilities does not look like a solution at all. If the full weight of scientific knowledge were placed in operation on the 100 million acres of land which are informed United States could cure all the farm product it needs from one state the size of Colorado—Stratford Beacon-Herald.

A Dependable Escort

A strong man to accompany your

life or daughter to parties or shops
can now be hired by the hour owing
to the enterprise of a retired Buda-
pest police official. You have only to
telephone if you are busy in the eve-
ning and a messenger will call.

Career Is Short

On the island of Bali temple dancers are retired at the age of 12 and

the theory that their muscles have become too stiff for the exquisite grace and agility of the dance by that time. These dancers are considered in their prime at the age of

Mrs. Newed: "I'm afraid I've put too much salt in the soup, darling."
Mr. Newed: "Not at all, sweetheart. There's not a bit of salt in it."

In addition to lightning flashing from the clouds to earth and from cloud to cloud, it sometimes flashes

from the earth up to a cloud.

Mr. Alchier has over and over again, in his career, been shown to be a man who will do what is right, and who will stand up for the principles which he believes in.

H. J. Mackenzie, a later critic of Alchier, noted and otherwise says in this regard: "What the average American democrat wants, and strives to get, is a politician who will stand up for the principles which he believes in."

There are 800,000 votes estimated to make the 245 vote to be filled in the House of Commons at Ottawa, in the election on Monday.

Mr. W. J. Barstow has been in the East for some time, owing to the ill-health of his father, he reported to have been visiting to Delia on Monday or Tuesday of this week.

Mr. and Mrs. R. B. Bigelow returned from their trip to the East, on the morning of October 8, to find that the character of the weather reported by the station this morning.

Motor Association Wants Drivers of Carbon Monoxide

At this season of the year and later on, motorists are urged by the Alberta Motor Association to give strict attention to their driving practices.

Not only should the driver be careful to avoid accidents from skidding or other causes but he should be mindful of the health and safety of his passengers.

Each year, almost beginning with the fall, several hundred persons in Canada and the United States lose their lives from carbon monoxide in their cars.

Deaths usually occur as the result of a car being operated with a garage with closed doors, either intentionally.

When a test was held recently it was found that approximately one-half of the vehicles contained very small quantities of carbon monoxide.

This should be a warning to all, as the presence of even a small quantity of the gas is very dangerous.

The Alberta Motor Association, which has been working to eliminate such hazards as carbon monoxide, should be a practical examination of the entire exhaust system with immediate replacement of leaky valves and broken down parts.
